PROFILE

Motivated Full-Stack Software Engineer with solid experience in web development, backend systems, and database integration. Skilled in Python, Angular, NodeJs, SQL, and REST API design, with personal projects exploring the intersection of technology and finance, data and Ai. Adaptable and collaborative, with international experience gained during a research internship in Japan.

EMPLOYMENT HISTORY

Gencoverly, Lyon (France) — *Software engineer*

Oct 2024 - Today

Develop and maintain features across the company's applications (Angular, NestJS, Python). Collaborate with data analysts on python Streamlit dashboards for data processing and visualization

Gencoverly, Lyon (France) — *Full Stack Developer Work Study Program*

Sep 2021 - Aug 2024

Developed a community platform (Angular, NestJS, Python) enabling docs, stories, and tool versioning. Worked independently with strong autonomy and problem-solving. Included SEO optimizations.

Kyushu University, Fukuoka (Japan) — *Data/Ai Research Intern*

Jun 2023 - Aug 2023

Researched the use of Stable Diffusion and ControlNet to augment small image datasets with diverse environmental conditions (night, rain, wind) for training background subtraction models

Electronic Music Production

PROJECTS

LaTomate Chrome Extension — Personal project (In progress)

An open source Pomodoro Chrome extension that I developed to improve my work time management. To develop it, I use React and Typescript. Implemented multi pomodoro modes, statistics visualisation...

Binance/TradingView Automated Trading Bot — Personal project

Developed a cryptocurrency trading bot using the Binance API. Implemented automated trading strategies, portfolio monitoring, and data visualization. This project introduced me to the world of finance and sparked my interest in financial technologies.

Queens Game Web Application — Personal project

Currently developing a competitive multiplayer web application to play the “Queens” puzzle game popularized on LinkedIn. Full-stack implementation with Angular frontend and Python backend, focusing on game logic, user interaction, and scalability.

Pokémon Go-Style Mobile Game — Academic Project

Collaborated in a team to design and develop an Android mobile application inspired by Pokémon Go, using geolocation and augmented reality concepts. Gained hands-on experience in Android Studio and mobile development practices.

Receipt Recommendation Platform — Academic Project

Worked in a team to build a web application that recommends recipes based on available ingredients. Created a recipe recommendation system using a Random Forest classification model trained on a large dataset of cooking recipes from Kaggle. Developed a Spring Boot REST API for backend services and implemented a responsive user interface.
